Software engineer and HCI/AI researcher building production applications, developer tooling, distributed systems, and intelligent products across iOS, TypeScript, Python, and cloud infrastructure.

EDUCATION

University of British Columbia — Vancouver, BC
Bachelor of Science, Computer Science (AI Specialization), Commerce Minor — *Sep 2022 – May 2027*

- **Awards:** youCode 2025 1st Place – SAP Stream, Hack the North 2024 Winner, Work Learn International Undergraduate Research Award, Faculty of Science International Student Scholar, Dean's Honors List

EXPERIENCE

AI Engineering Co-op → Jr. AI Implementations Engineer (Part-time) — Oct 2025 – Present
IFS Copperleaf — *Vancouver, BC*

- Retained part-time after the co-op term as a **forward-deployed engineer**, building production AI/data applications with **Databricks, Spark, Delta, and LLM APIs** from stakeholder discovery through deployment.
- Owned an **AI-powered ROI Analytics Portal** end-to-end; built a conversational assistant with interactive analytics adopted by **Department Leaders and Senior Leadership**.
- Developed a **Data Validation Portal** automating enterprise data-quality checks before AI ingestion, saving an estimated **160+ employee hours annually**.

Undergraduate Research Assistant (HCI/AI) — Feb 2025 – Present
SOCIUS Lab, UBC — Prof. Dongwook Yoon — *Vancouver, BC*

- Architected an **agentic web-accessibility auditing framework** with **40 WCAG-specific agents** and a shared **31-tool browser/accessibility library** for interactive inspection and machine-readable evidence traces.
- Evaluated agents, VLMs, and rule-based tools on a **250 page–criterion benchmark** across 11 platforms; agents recovered **67/78 cases (86% recall)**, versus **36% for axe-core** and **67% for an uncued VLM**, at **56% precision**.
- **First author** of *Agentic Web Accessibility Auditing* and **second author** of *WRAP*, both submitted to **ACM CHI 2027**; WRAP optimizes WCAG task allocation across automated and human audit modalities.

Undergraduate Teaching Assistant — Sep 2024 – Jun 2025
Computer Science Dept., UBC — *Vancouver, BC*

- Instructed **250+ students** in Computer Networking (**C/C++, TCP/IP, DNS, routing, HTTP, Linux**); redesigned TCP server and FTP tutorials, contributing to a **20% increase in attendance**.

PROJECTS

Roadpack | *Swift, SwiftUI, Cloudflare Workers, Durable Objects, WebSockets, D1, R2* | **Live on App Store** — Aug 2026 – Present

- Designed and shipped a native **iOS group road-trip platform** with live pack locations, stop requests, regrouping, expenses, Rewind, Live Activities, widgets, App Intents, Universal Link/QR invites, and background location tracking.
- Architected a real-time **Cloudflare Workers** backend using **Durable Objects + WebSockets**, authoritative snapshots, idempotent commands, offline outboxes, D1, R2, and queued push delivery.
- Shipped **203 Swift files across 13 feature areas** with **40 iOS + 20 backend test files**; built and delivered every TestFlight/App Store release from **Windows via GitHub Actions macOS runners**.

BuildStory | *TypeScript, Node.js, CLI/TUI, Git, JSONL, LLM APIs* | **Open Source** — July 2026 – Present

- Built an open-source, local-first **developer tooling platform** that converts Git history and AI coding sessions from **Claude Code, Codex, Cursor, and Gemini Antigravity** into structured engineering stories through a common adapter architecture.
- Engineered a privacy-preserving scanner that streams JSONL in **64 KB chunks**, normalizes provider token/cost data, never reads source files, validates canonical uploads, and supports redacted reporting; maintained **330+ automated tests**.

Mune | *Swift, MLX Swift, LiteRT-LM, Node.js, Plaid, RevenueCat* | **Live on App Store** — May 2026 – Present

- **Co-founded** and shipped an iOS personal-finance app with Safe-to-Spend, budgets, goals, subscriptions, notifications, and production bank connectivity through **Plaid**.
- Built an **on-device LLM stack** using **MLX Swift** and **LiteRT-LM** with device-aware model selection and local finance tools; developed the Node/Vercel backend for Plaid token exchange, webhooks, transaction refresh, authentication, and account lifecycle.

TECHNICAL SKILLS

Languages: Swift, TypeScript/JavaScript, Python, C/C++, SQL, Java, Dart
Backend & Systems: Node.js, FastAPI, Cloudflare Workers, Durable Objects, WebSockets, D1, R2, Databricks, Spark, Delta Lake
Mobile & Web: SwiftUI, iOS SDK, React, Next.js, Flutter, Playwright, GitHub Actions, Docker
AI/ML: LLM Agents, MCP, RAG, VLMs, LangChain, OpenAI, Gemini, Claude, PyTorch, MLX Swift, LLM Evaluation
